

# Entrée Release Notes

November 17, 2006

## ***Server side includes***

Server side includes (SSI) for files are now supported. This allows a specified file to be included in a HTML page. This is useful if the information in the file changes frequently or it is used in multiple pages.

The format is as follows:

```
<!--#include file="included.file" -->
```

or

```
<!--#include virtual="/directory/included.file" -->
```

file= specifies a relative file link and virtual= specifies an absolute file location.

**Note:** The space between the end of the file name and the closing HTML comment is required.

## ***New commands***

The following command and command options are now supported:

Command	Command options
ASSIGN	USERNAME KATAKANA CWALENG OPSECURITY OPERKEYS DS3270 DSSCS TERMINAL
INQUIRE TERMINAL	USERNAME
